Nate Macy

Septic Tank	
Septic Tank Watertight	Yes
Septic Tank Scum Depth at Inlet (inches)	3.00
Septic Tank Sludge Depth at Inlet (inches)	3.00
Septic Tank Sludge Depth at Outlet (inches)	2.00
Septic Tank Scum Depth at Outlet (inches)	0.00
Septic Tank Pumping Required	No, pumping not required
Septic Tank Inlet baffle condition	Satisfactory
Septic Tank Outlet baffle condition	Satisfactory
Septic Tank Outlet filter	Not present
Outlet filter cleaned	
Septic Tank Condition of Risers	Not present
Septic Tank Condition of Lid:	Satisfactory
Septic Tank Lids Secured	Yes
Septic Tank Comments	
Second Septic Tank?	No
Pump Tank	No
Sacand Dump Tank?	
Second Pump Tank?	
	No No
Sand Filter (SF)	
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from	
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious	No
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed	No Yes
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield	No Yes No
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation	No Yes No Yes No Yes No
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition	No Yes No Yes
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports	No Yes No Yes No Yes No
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins	Yes No Yes No No N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access)	Yes No Yes No Yes No
Sand Filter (SF) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition	Yes No Yes No N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution	Yes No Yes No N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution Diversion Valve present/functioning	Yes No Yes No N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution Diversion Valve present/functioning Laterals flushed - Drainfield	Yes No Yes No N/A
Proprietary Treatment Product (PTP) Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution Diversion Valve present/functioning Laterals flushed - Drainfield Squirt Height At Distal End (inches)	Yes No Yes No No N/A N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution Diversion Valve present/functioning Laterals flushed - Drainfield Squirt Height At Distal End (inches) Orifice Size Used (inches)	Yes No Yes No No N/A N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution Diversion Valve present/functioning Laterals flushed - Drainfield Squirt Height At Distal End (inches) Orifice Size Used (inches) Equal Distribution - Drainfield	Yes No Yes No N/A N/A
Sand Filter (SF) Drip (SDS) Drainfield Surface water/downspouts diverted away from drainfield Improper encroachment (structures/impervious surfaces) Structural Integrity and Vegetative Cover Properly Managed Ponding, Seepage, or Saturation near/around Drainfield Describe Ponding, Seepage, Saturation Monitoring Ports Condition Is sewage ponding in ports Effluent at same level in all basins Distribution Box (surface access) Distribution Box Condition Equal Distribution Diversion Valve present/functioning Laterals flushed - Drainfield Squirt Height At Distal End (inches) Orifice Size Used (inches)	Yes No Yes No N/A N/A

Level In Septic Tank At Start Of Test	Normal(invert of outlet baffle)
Level At End Of Test	Normal(invert of outlet baffle)
Pump Systems - Float Tether Length (inches)	
Number Of Pump Cycles Run	
Gallons Pumped During Test	
Evidence Of Dye Or Effluent Surfacing	No
Color Of Dye Used	Green
